S. Patent and Trademark Office	,				

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 7-11, and 15, drawn to a surveillance system, classified in class 342, subclass 357.01+.
- II. Claims 6, 12-13, and 14, drawn to an Identification Friend or Foe (IFF) unit, classified in class 342, subclass 45.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because any type of IFF unit can be used with the combination. The subcombination has separate utility such as a IFF unit with specific command signals.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/668,700 Page 3

Art Unit: 3662

Invention I above is further restricted as follows:

III. Claims 1-5 and 15, drawn to a surveillance unit including an IFF unit responsive to surveillance signals exceeding a predetermined power level, classified in class 342, subclass 44.

IV. Claims 7-11 and 15, drawn to surveillance unit including an IFF unit which broadcasts repeatedly at predetermined times messages, classified in class 342, subclass 357.09.

NOTE: claim 15 is generic to both groups III and IV.

Inventions III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as detecting a power level of a surveillance signal. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/668,700

Art Unit: 3662

Group II above is further restricted as follows:

V. Claim 6, drawn to an IFF unit including a radar signal detector responds to surveillance radar main beam and generates commands to transmit data, classified in class 342, subclass 73+.

Page 4

- VI. Claims 12-13, drawn to an IFF unit including a transmit controller compares the current time with predetermined times of transmission stored in memory to generate commands to transmit data, classified in class 342, subclass 88.
- VII. Claim 14, drawn to an IFF unit including a bi-directional communication device responds to a received commands and broadcasts a messages, classified in class 342, subclass 45.

Inventions V, VI, and VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case: invention V has separate utility such as a radar signal detector responds to surveillance radar main beam and generates commands to transmit data; invention VI has separate utility such as a transmit controller compares the current time with predetermined times of transmission stored in memory to generate commands to transmit data; and invention VII has separate utility such as a bi-directional communication device responds to a received commands and broadcasts a messages. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Isam Alsomiri whose telephone number is 571-272-6970. The examiner can normally be reached on Monday-Friday 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Tarcza can be reached on 571-272-6979. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/668,700
